

Model Notes:

1. 70-Amp and 100-Amp alternators are furnished standard with 2.7"-diameter single deep vee pulley (Model #60-0010). 120-Amp and 150-Amp alternators are furnished standard with 2.7"-diameter dual deep vee pulley (Model # 61-0020). Other vee and serpentine type pulleys are available upon request. For a full list of pulleys, see the "Accessories" page on this website.

2. When using a 6-Series alternator in conjunction with an isolator, a Leaded Axial diode (3.0 amp 200V, 0.5mA) must be installed between the Brown Ignition wire and the alternator high output B+ terminal in order to utilize the Smart Ready internal regulator. See the 6-Series bulletins in the "Technical Support" page of the website for additional installation instructions.

3. On 6-Series, 24-volt alternators, a 5%, 5-watt, 300 ohm Axial Cement Power Resistor must be connected between the D+ (low amperage) circuit and the ground terminal when operating a charge lamp from the D+ circuit. Resistor is available at the following; <http://www.mouser.com/catalog/622/450.pdf>.
