

BATTERY TEMPERATURE SENSOR

- Compatible With All Blue Sky Energy Charge Controllers Capable Of Temperature Compensation
- Sensor Element Is Double Sealed For Protection From The Elements
- Sensor Housing Mounts To Battery Terminal To More Accurately Measure Internal Battery Temperature
- Full 12 Month Limited Warranty
- ETL Listed To UL STD. 1741, Certified to CAN/CSA STD. E335-1/2E, CE Labeled

■ Battery Temperature Sensor Improves Charge Control and Battery Performance.

Applying the proper charge voltage is critical for achieving optimum battery performance and longevity. The ideal charge voltage required by batteries changes with battery temperature. The battery temperature sensor allows the charge controller to continuously adjust charge voltage based on measured battery temperature. Temperature compensation of charge voltage assures that the battery receives the proper charge voltage as battery temperature changes during normal operation.

The graph above shows how the Solar Boost 3024iL would use the temperature sensor to adjust charge voltage based on battery temperature. Without temperature compensation charge voltage would be too low at low battery temperatures leading to chronic under charging and battery damage due to sulfation. At high battery temperatures charge voltage would be too high leading to excessive water loss and undue degradation of the positive plate. Both of these conditions can impair battery performance and shorten battery life.

SPECIFICATIONS	
Accuracy	±1.0°C @ 25°C • ±2.5°C over full range
Temp. Range	-40 – +100°C
Cable	20 awg 105°C PVC
Cable Length	20 feet (6.1m)
Lug Mounting Hole	0.400" (1.02cm) Nominal Diameter

As a part of our continuous improvement process specifications are subject to change without prior notice

■ Part Number & Shipping Weight

Temp sensor, 20' 930-0022-20 ... 1 lbs... 0.45kg

■ Available From:

2598 Fortune Way, Suite K • Vista, CA 92081, USA
 800-493-7877 • 760-597-1642 • Fax 760-597-1731
