

16,500 BTU System

16,500 BTU System
M16

This is our work horse unit! The Mermaid Model M-16 - 16,500 BTU system produces phenomenal climate control to vessels ranging from 38-45 feet. Manufactured on high grade 304-18 gauge stainless steel, this unit was engineered with your comfort in mind.

This unit is available in Right, Left, or Top air discharge configurations. The unit produces 16,500 BTU in the cool mode and 18,000 BTU in the reverse cycle heat mode. We recommend at least three discharges for this unit. One 8" x 6" grill should be within 6 feet of

the unit and at least two other discharges need to be at least the 4" round supply vents. As always, more is better; these are minimums. The electric heat option is NOT available on this model.

All M16 models include a digital thermostat of your choice (see below), an insulation mounting pad, and an air output collar. Pump not included.

Price \$2,290.00

This product is designed to cool/heat cruisers up to 40' and sailboats up to 45'.

Running amperage

- Cool = 12 amps
- R/C = 13.5 amps
